

IMPORTANT LUNG

CANCER FACTS

Lung cancer is the leading cause of cancer death in the US and has one of the lowest 5-year survival rates. According to the “2023 State of Lung Cancer” report by the American Lung Association:

THE CLOCK IS TICKING

Every 2 minutes, someone in the U.S. is diagnosed with lung cancer, and **every day**, lung cancer takes the lives of more than **357** of our friends, neighbors and loved ones.

EARLY DIAGNOSIS IS KEY

Nationally, **only 26.6%** of cases are diagnosed at an early stage when the five-year survival rate is much higher (63%). Unfortunately, **44%** of cases are not caught until a late stage when the **survival rate is only 8%**.

SCREENING SAVES LIVES

Lung cancer screening gives us hope in the effort to defeat lung cancer and represents an opportunity to **save more lives**.

ANNUAL CT SCANS

Screening with annual low-dose CT scans can **reduce the lung cancer death rate by up to 20%** by detecting tumors at early stages when the cancer is more likely to be curable.
